

Student Answer Sheet

Student: Sample Student B

Answer 3

Newton's first law says an object remains at rest or in uniform motion unless acted on by an external force. Second law relates force, mass and acceleration. Third law says every action has an equal and opposite reaction. A balloon moving forward as air escapes is an example of the third law.

Answer 1

Photosynthesis is the process by which green plants make food using sunlight, carbon dioxide and water. Sunlight provides the energy needed for this process.

Answer 6(b)

Solar energy is environmentally friendly because it produces electricity without burning fuel and therefore produces very little direct air pollution during operation.

Answer 9

The heart is a muscular organ that pumps blood throughout the body. It sends oxygen-rich blood to body tissues and returns oxygen-poor blood to the lungs for oxygenation.

Answer 2

Osmosis is the movement of water through a semi permeable membrane from a region of higher water concentration to lower water concentration. For example raisins swell when kept in water.

Answer 7

Plant cells have a cell wall and chloroplasts, while animal cells do not. Plant cells generally have a large central vacuole, while animal cells have smaller vacuoles.

Answer 6(a)

Renewable energy comes from sources that are naturally replenished. Examples are solar energy and wind energy.

Answer 10

A food chain shows how energy and nutrients pass from one organism to another through feeding. Example: grass, grasshopper, frog, snake, eagle.
